

## Lower Overhead - Increased Revenues

Poker is the fastest growing game in the world, and a huge source of player traffic. At the same time, standard poker tables generate some of the lowest per square foot revenues of all games.

PokerMate is a digital card table that provides benefits for both the house and for players.

## No shuffling - No dealing - More hands

The house wins because, unlike expensive human dealers, PokerMate's precision software distributes cards and calculates payouts, split pots, side pots and rake without error. And PokerMate works around the clock with no need for a break, saving you thousands in salaries.

Players love the faster, more exciting play. There's no string bets, no calling out of turn, no dealer tips and no dealer mistakes. And players prefer when rake is calculated automatically, and collected discreetly. Generate even more revenue with PokerMate™ with additional side bets and side games, something that could never be done at a traditional poker table with a dealer and cards.

Player screens are touch-sensitive for easy viewing. Players can fold, check, post blinds, raise or call during the course of a game, all with a simple touch. Players can also auto-post blinds and select their language of choice. All these options are clearly indicated with easy-to-read touch-sensitive buttons.

## See it all!

PokerMate's central viewing screen shows players everything they've come to expect from a Texas Hold'em table:

- Community cards
- Pot amounts
- Chip stacks
- Player commitment
- Winning hands
- Payout amounts

## Cash Options

PokerMate™, just like all other Amaya products, uses the very latest technology in gaming hardware. PokerMate™ is customizable to best suit the operator cash-in and cash-out requirements:

- bill acceptor
- coin hoppers
- ticket printer
- key in-key out
- player account card

## Efficient Management

PokerMate tables are simple and easy to manage. Each table is linked to a central console which provides:

- seamless tracking of player activity
- easy switching between regular and tournament play
- instant readouts from any table during play
- hardware status display
- financial statistics in real time

Amaya's PokerMate™ tables can accommodate 6, 8 or 10 players at a time, and are monitored from a central location in your gaming space. All error is eliminated, as the tables' computerized system faultlessly performs all transactions. You'll appreciate the ease and efficiency of Amaya's PokerMate™ tables.

## Blackjack

Not enough players to start a poker game? No problem, maximize profitability per square foot with PokerMate's™ blackjack add-on. Players can play up to 2 hands simultaneously, that means on a 10 seat PokerMate™ there could be up to 20 hands of blackjack in play, something otherwise impossible with a traditional dealer. Operators can customize the graphical display with their own colour schemes and logos as well game play options such as the number of decks per shoe, pay out rates and other customizable house rules.
